KriyoPay

INVOICE-TO-PAYMENT CONTROL FOR INDIAN BUSINESSES

Every invoice. A clearer path to approval.

Capture supplier invoices, match purchases and receipts, route approvals and prepare a reviewed accounting handoff.

FROM DOCUMENT TO DECISION

01 Capture — 02 Match — 03 Approve — 04 Export

Record actual payments and retain the review trail throughout the process.

CONTROL

Compare invoices with purchase orders and goods receipts.

COLLABORATION

Bring finance, approvers and suppliers into a shared workflow.

CONNECTION

Prepare reviewed exports for your accounting system.

Pricing & features

Basic ₹2,999/month Pro ₹7,999/month

Enterprise from ₹19,999/month

Client discussion proposal. Proposed inclusions and rates are subject to written scope and availability confirmation. Applicable taxes are additional.

PLANS & PRICING

Choose the capacity your team needs.

Three proposed plans. A complete core workflow, with more automation and integration depth as you grow.

BASIC

₹2,999

/ month

₹29,990 / year

250 invoices / month

5 internal users

Tally CSV export

For small finance teams

PRO

₹7,999

/ month

₹79,990 / year

1,000 invoices / month

15 internal users

1 accounting connector

For growing finance teams

ENTERPRISE

FROM

₹19,999

/ month

From ₹1,99,990 / year

3,000 invoices / month

40 internal users

Up to 2 connectors

For integration-led teams

Commercial detail	Basic	Pro	Enterprise
Standard onboarding	Included	₹4,999 once	From ₹19,999 once
Baseline company scope	1 workspace	1 workspace	1 workspace; more quoted
First-response target*	2 business days	1 business day	4 business hours, critical incidents

Annual value: pay for 10 months and receive 12 months of subscription access. Invoice allowances still reset monthly. Enterprise figures are starting allocations; final scope is quoted.

* Business hours: Monday-Friday, 9:30am-6pm IST, excluding published holidays. Response targets are not resolution guarantees. Accounting connections require setup and customer acceptance. All prices exclude applicable taxes.

FEATURE COMPARISON

See what each plan includes.

Proposed entitlements. Connection-dependent capabilities are activated after configuration and acceptance.

Capability	Basic	Pro	Enterprise
Upload + reviewed AI extraction	Included	Included	Included
Supplier records + supporting files	Included	Included	Included
Purchase orders + partial GRNs	Included	Included	Included
Invoice / PO / receipt matching	Included	Included	Included
Duplicate screening + exceptions	Included	Included	Included
Multi-level approvals + activity history	Included	Included	Included
Configured email / Gmail intake	Included	Included	Included
Vendor portal + questions	Included	Included	Included
Payment recording + partial payments	Included	Included	Included
Credit / debit notes	Included	Included	Included
Standard reports + Tally CSV	Included	Included	Included
Custom fields + supported bulk actions	-	Included	Included
Eligible rule-based auto-approval	-	Validated rules	Validated rules
Statement reconciliation, CSV / XLSX	-	Exact matching	Exact matching
Tax checks + month-end checklist	-	Included	Included
Reviewed Tally accounting XML	-	Included	Included
Standard accounting connections	CSV only	1 connector	Up to 2
Read-only API + supported webhooks	-	Included	Included
Available advanced operational reports	-	Included	Included
Fleet & Trips module	-	Optional add-on	25 vehicles / 500 trips
Named implementation contact	-	-	Included
Quarterly adoption review	-	-	Included

GRN = goods receipt note. AI results require human review. API coverage is read-only; webhooks cover supported events. Tax checks screen format/arithmetic and do not verify government records or file returns.

KriyoPay

BASIC & PRO IN PRACTICE

A useful workflow at every stage.

Give people a clear next action, from a new supplier document to an approved accounting export.

BASIC | Control daily invoices

- **Capture with review.** Upload documents or use configured intake. Check extracted values before relying on them.
- **Match what was received.** Compare the invoice, purchase order and partial goods receipts. Resolve quantity or amount differences.
- **Route decisions.** Use supported multi-level approvals, rejection and correction steps. Preserve the activity history.
- **Work with suppliers.** Receive portal submissions and resolve questions around invoice information.
- **Track settlement.** Record payment references, partial payments and remaining balances.
- **Prepare the handoff.** Export reviewed Tally-ready CSV with configured ledger mappings.

PRO | Scale the finance workflow

- **Handle more work together.** Process larger invoice volumes with more users, custom fields and supported bulk actions.
- **Apply supported rules.** Use eligible auto-approval only after rules and financial controls are validated.
- **Reconcile statements.** Import mapped CSV/XLSX statements and review exact amount matches against recorded transactions.
- **Review month end.** Use operational tax flags, the review checklist and available reports to focus follow-up work.
- **Connect accounting.** Add one supported TallyPrime, ERPNext or Zoho Books connection after acceptance testing.
- **Share supported data.** Use read-only API access and signed outgoing webhooks within verified coverage.

Example: a supplier invoices 100 units, but only 80 are received. The matching workflow highlights the difference so the team can investigate and record a review decision before proceeding.

Configured Gmail intake is bounded and read-only. Vendor portal access uses controlled links. Financial exports create accounting records; payment recording does not initiate a bank transfer.

KriyoPay

ENTERPRISE & ACCOUNTING

Connect with an acceptance plan.

Map the customer environment, test a representative workflow and review outcomes before activating financial writes.

- **Capacity for larger teams.** Start with 3,000 invoices and 40 users monthly, then agree a larger allocation if needed.
- **Two standard connections.** Configure up to two supported accounting connections for the baseline company scope.
- **Structured implementation.** Include a mapping workshop, acceptance checklist, training and an implementation contact.
- **Reviewable exchange.** Use import staging, approved export snapshots, sync history and conflict handling within supported coverage.

System	Supported scope and setup considerations
TallyPrime	Reviewed CSV/XML and supported accounting reads/writes. Customer Tally endpoint and ledgers must be configured. Inventory PO/receipt writes are outside current coverage.
ERPNext	Supported imports and outbound draft documents. Validate company, item, account and tax mappings. Withholding export limitations apply.
Zoho Books	Supported vendor, PO, bill and payment records. Goods receipts use a separate Zoho Inventory connection. Withholding export limitations apply.
Dynamics 365 Finance	Available for separately scoped discovery and validation. Customer entities, dimensions, journals and metadata determine implementation effort.

Included connection does not mean universal two-way sync. Final resource coverage, credentials, accounting mappings and any extra implementation work are agreed in writing. The customer supplies third-party licenses and access.

Existing posted financial records are not silently overwritten. An uncertain remote write requires reconciliation before another attempt. Additional legal entities, consolidated reporting and bespoke integration work are separate scopes.

FLEET & TRIPS

Bring trip operations into financial view.

An optional transport workflow for tracking trip revenue, reviewed costs, driver earnings and collections.

INCLUDED WITH ENTERPRISE

25 active vehicles | 500 new trips / month

Pro add-on: ₹2,999 / month for the same starting allowance.

- **Vehicle and driver records.** Maintain the operational directory and supported assignments.
- **Trip milestones.** Track transport orders, dispatch progress and delivery proof.
- **Reviewed trip costs.** Capture fuel, toll, repair and other expense evidence for review.
- **Trip performance.** Review operational margin reports using recorded income and approved costs.
- **Driver earnings.** Apply supported per-trip or per-kilometre pay policies.
- **Advances and recovery.** Review advances, recoveries and driver settlement balances.
- **Customer collections.** Track transport customer invoices, receipts and outstanding amounts.
- **Follow-ups.** Keep missing documents and unresolved settlement work visible.

Separate financial views: transport customer receivables and driver settlements remain distinct from supplier accounts payable. Supplier bills consume the AP allowance; new trips consume the fleet allowance.

Scope to agree before activation

The fleet module and usage allowances require acceptance and configuration. GPS hardware, live vehicle tracking, route optimization, statutory payroll and bank transfer execution are outside this offer. Larger fleets and trip volumes are quoted.

COMMERCIAL DETAILS

Clear allowances. Predictable expansion.

Choose capacity explicitly as your business grows. Additional scope is confirmed before purchase.

Add-on	Proposed charge	Allowance / basis
Basic invoice pack	₹999	100 additional invoices
Pro invoice pack	₹2,999	500 additional invoices
Enterprise invoice pack	₹4,999	1,000 additional invoices
Additional internal user	₹199 / month	Per named user; capacity subject to plan
Fleet & Trips on Pro	₹2,999 / month	25 active vehicles / 500 new trips
Migration, extra entities or ERP work	Written quote	Scope agreed after discovery
WhatsApp intake	Separate quote	Provider, setup and usage acceptance

How usage works

- **Invoice allowance.** One distinct accepted supplier invoice consumes one unit. Failed uploads, rejected duplicates and field corrections do not consume another unit.
- **AI allowance.** One extraction of up to five source pages is included per invoice. Platform-failed retries do not consume another allowance. Larger documents and user-requested re-extractions need agreed pricing.
- **Monthly reset.** Invoice packs apply to the subscription month and do not roll over. Annual plans still receive monthly capacity.
- **User seats.** Owners, finance users, approvers and auditors count as internal users. Vendor portal identities do not consume internal seats.
- **Additional limits.** Storage, retention, file-size, API and webhook allowances are specified in the final service schedule; no unlimited-use promise is implied.

All displayed rates are proposed and exclude applicable taxes. Invoice capacity purchases are explicit. Additional companies, third-party licenses, bespoke work and dedicated infrastructure are separately scoped.

KriyoPay

YOUR NEXT STEP

Start with your real invoice workflow.

A focused demonstration and a representative pilot establish scope before a production rollout.

01

Discover

Confirm monthly volumes, users, legal entities, approval steps and accounting systems.

02

Configure

Prepare supplier data, matching settings, roles, intake and agreed accounting mappings.

03

Validate

Walk through representative invoices, partial receipts, exceptions, approvals and exports.

04

Activate

Confirm written scope and readiness, train the team and activate the agreed package.

Confirm in the final proposal

- **Commercial scope.** Plan, allowances, onboarding, integrations, support hours, taxes and third-party charges.
- **Data and service terms.** Storage/retention, security and deployment readiness, cancellation, renewal, refunds and export arrangements.
- **Feature acceptance.** Proposed packaging is not a declaration that every capability is available in production. Connection and fleet activation require validation.

SSO, consolidated multi-company reporting, verified GST checks, advanced bank matching and dedicated hosting are future or separately scoped options unless expressly confirmed. Operational tax checks do not constitute statutory filings.

Let's map KriyoPay to your business.

Ask your KriyoPay representative for a workflow demonstration and a written proposal.
